

Justin J. De La Cruz

Software Developer & Founder

787-634-4340 | justinjdelaacruz@outlook.com | linkedin.com/in/justinjdelaacruz | nytsu.github.io

SUMMARY

Software developer with 3+ years shipping products for institutional clients, and founder of a hardware-software company built from concept to live deployment. Experienced translating ambiguous problems into working systems, across AI, full-stack, embedded system, and firmware.

EXPERIENCE

Founder

Nytsu | Sept 2025 - Present | Puerto Rico

- Shipping JustIn: wireless scoring and performance measurement system for competitive fencing. Own the full product end-to-end, including embedded hardware, firmware, React Native app, and brand.
- Conducted a two-hour live field test with fencing instructors and club members in August 2026, running the entire class using Justin's scoring system. All bouts ran successfully, while the test surface concrete improvements for the next iteration.
- Applied domain expertise as a national-level fencer to define the problem and prioritize what to build first.

Software Developer

INprende | Mar 2023 - Feb 2026 | San Juan, Puerto Rico

- Built and shipped an internal AI assistant using Gemini and Mastra, initially developing the frontend and later contributing to agent logic, backend, prompt/instruction design, and structured proposal generation.
- Delivered full-stack platforms for government and internal clients, including a ticketing and checkout system (responsive frontend, backend services, database synchronization) and public sector platforms for the Puerto Rico Department of Family and Instituto de Cultura de Puerto Rico.

Disney College Program

The Walt Disney Company | Jun 2022 – Nov 2022 | Orlando, Florida

- Delivered high-quality guest experience in a fast-paced environment across food and beverage operations at Disney's Hollywood Studios.
- Collaborated across teams to resolve issues and maintain operational efficiency.

Web Development Consultant

SMX Services & Consulting | Aug 2021 – Feb 2022 | Miami, Florida

- Built full-stack features for an insurance company's property insurance underwriting platform using OutSystems, including UI, backend logic, and database work.
- Developed SQL objects and procedures for database stability and data management, and improved application performance through targeted optimization and client-requested feature design.

SKILLS

LLM APIs (Gemini), AI Agents (Mastra), Prompt Design, AI Coding Tools (Claude Code, Cursor), React, React Native, JavaScript, TypeScript, Java, Python, SQL, AWS, Embedded Systems, Firmware Development

EDUCATION

Polytechnic University of Puerto Rico — B.S. Computer Science, 2021
